

THE FLATJACK CHAIR

The FlatJack is a rock-solid and uncommonly comfortable folding chair for use indoors and out. Simple, contemporary and considered, this modern interpretation of a design classic has been painstakingly planned and meticulously manufactured.

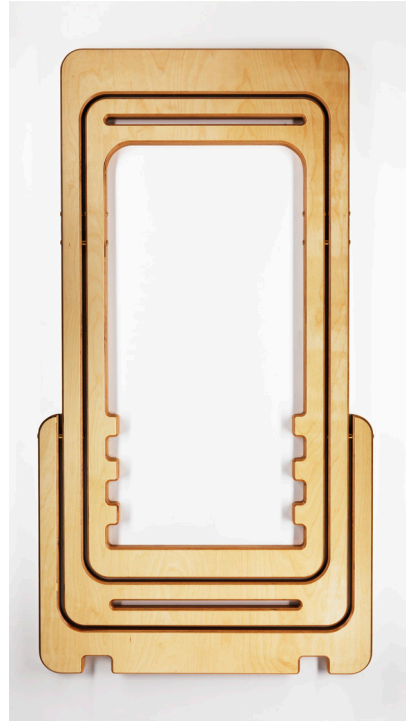

FlatJack's sleek wooden frame is perfectly machined from a single sheet of sustainable birch ply. It is then hand finished before being stained and either lacquered or oiled. Its removable, double layer sling is made using luxury outdoor textiles by Kvadrat and Sunbrella, and has

reinforced stitching throughout. The custom metal fittings are machined and polished by hand, and available in solid bronze, brass or stainless steel.

The chair has 4 reclining angles and can be adapted for taller or shorter people (8 positions in all). Both chair and sling are reversible.

Folds perfectly flat and can be stacked. Water and UV resistant

*Designed and built
solely in the United Kingdom*

MATERIALS
